# Barcode Placement for DTP tutorial

1. Replace the existing barcode (source's or legacy one) by the new one provided by the client.

2. Cut (CTRL+X) the Barcode <u>FRAME</u> from the document (Not only the barcode Image).

3. Create a layer and name it "BARCODE". It is important that the new layer has "Show Layer" and "Print Layer" checkboxes selected:

4. Move the new layer to the top of the layer pannel:

5. Paste the barcode you cut in the first step using the "Edit/Paste in place" option:

6. If the document has a text box with the PN placed above the barcode, remove this text box:

(241) LBL-4206-06-001_REV_C

PLEASE REMOVE

7. Expand the barcode's frame by the bottom so the Barcode Part number shows:

(241) LBL-4206-06-001  REV  C

8. Expand the barcode frame to the sides and the top and verify that the complete barcode is shown:

206-06-001  REV  C

INCORRECT

(241) LBL-4206-06-001_REV_C

CORRECT

9. Make sure that there isn't any frames or text boxes from the elements around the barcode overlapping with the barcode frame:

o de atención al cliente.#

INCORRECT

(241) LBL-4206-06-001_REV_C
